

Examples/Definitions	Pain Peripheral Nerve		Pediatrics				Spine			Tumor		Trauma		Vascular			Epilepsy/Functional			Minor Procedure								
	General	MVD	General		Shunt*		Degenerative		Trauma Tumor Infection	Tumor		Trauma		Vascular			Epilepsy/Functional			ICP monitor	EVD	Cervical Traction	Airway	Central venous catheter	Arterial Catheter	Stereotactic head frame	Programs shunt	Shunt tap
Routine	carpal tunnel release, spinal cord stimulation, intrathecal pump		CSF shunt*, baclofen pump, Chiari decompression				lumbar or cervical laminectomy, lumbar discectomy			resection of non-eloquent glioma or metastasis, stereotactic biopsy		burr hole, craniotomy for hematoma or penetrating injury		pterional craniotomy, diagnostic catheter angiography			DBS placement, subdural electrode placement, topectomy			ICP monitor	EVD	Cervical Traction	Airway	Central venous catheter	Arterial Catheter	Stereotactic head frame	Programs shunt	Shunt tap
Complex	DREZ lesions, cordotomy, neuroma in continuity, brachial plexus repair, nerve graft, nerve transfer		brain tumor, synostosis repair, tethered cord, ventricular endoscopy, indirect vascular bypass, craniotomy for epilepsy				Anterior Cervical Discectomy and Fusion (ACDF), posterior lumbar fusion		spinal cord tumor resection, fracture stabilization		resection of eloquent glioma, ventricular or posterior fossa tumor		repair of vascular injury or CSF fistula, posterior fossa hematoma		carotid endarterectomy, aneurysm clipping, arteriovenous malformation resection			temporal lobectomy										
Advanced			Performs surgical stabilization of the spine in a patient aged less than three years				thoracolumbar or craniocervical reconstruction		reconstruction after infection or vertebral tumor resection						aneurysm coiling, vascular malformation embolization, extracranial-intracranial bypass
